Hello Sir/Ma'am

I am excited to see your opening for a IOS Developer, and I hope to be invited for an interview.

My background includes working on multiple iOS applications out of which a few are live on iTunes store. I have also experienced with iOS latest features ARKit and CoreML and have worked with iOS SceneKit and SpriteKit gaming frameworks. I have worked on various bug fixings on already live applications as well.

Apart from this currently I am
   •Managing the team of iOS in my current company.
   •Working directly with client and managing all the requirements of the Project.
   •Involved in discussion with Project Manager for work planning, task assignment, effort and schedule tracking activities.
   • Actively participated in re-factoring efforts that simplified application code, reduced development time and improved overall performance of product.
   • Efficiently executed Agile Software development processes and lead the daily scrum meetings.
   • Conceptualised and constituted the checklist to allow team members to follow product specific standards and to improve upon quality.

Looking forward to be a part of your company!
